Start—Tradeshow Open 10:00am

Agserv Introduction 10:30am

Doctor Don Ewart 10:45am
Victoria

"Politics, sex and religion"
Now that we've got your attention, lets look at each one.

Politics - This talk is a bit about regulation and competing political demands.

Sex - Insect reproduction and how it affects pest control options.

Religion (the risky bit) Here we go into how we do things more out of faith and habit than analysis and choosing the best methods.

Peppered with anecdotes, and questions, it should make for a lively talk with lots of audience participation.

Syngenta 12:15pm

Talon: Rodent bait strategy & frequently asked questions.
Demand: The latest technical information and label changes.
Optigard Ant Bait Gel : Using colony dynamics and residual sprays to achieve optimum results.

Lunch 12:45pm

Bayer 1:45pm

What's 'New' in fly control that can give results for you and your clients in the Commercial Pest Management marketplace?

See how the new 'Quickbayt Spray' can be used as a part of a total fly control program & add extra value to your commercial work.

Dupont 2:15pm

DuPont Professional Products brings the company's tradition of science, innovation and safety to the Australian Pest Management industry. At DuPont they believe it is all in the chemistry. Their many accomplishments are the result of extensive research & development, focused on creating advanced products to meet customer needs such as their latest innovation, DuPont™ Arilon®insecticide for general pest control. Arilon® was designed specifically for the pest management professional and contains a unique non-repellent active ingredient, indoxacarb, so it performs like no other insecticide for interior and exterior residual spray insect control.

PROGRAM

10:00amTrade Show Open

BASF 2:45pm

Non Repellant insecticides: Correct application of these products is important to get the result your clients want. We will arm you with the knowledge to get the right result.

Afternoon Tea 3:15pm

PCT International 3:45pm

"Research scientists have developed and Pest Managers have utilized and come to rely upon sophisticated termite management tools, systems and procedures. Most of these were developed during times of drought in Australia over the last 15 years or so. Parts of Australia have experienced the wettest twelve months or so in recorded history. There has been little discussion about how subterranean termites respond to environmental stimuli and changes in weather patterns."

Bell Laboratories 4:15pm

The changing requirements of Rodent Control
PCO's need to be aware of environmental situations.

This informative talk looks at Bell Labs Environmental Stewardship projects, how their factory processes are going green. It will also cover the consideration of different actives when baiting different situations through to minimising the toxic footprint when baiting commercial and domestic situations.

FMC 4:45pm

Soil chemical termiticide barriers remain a highly acceptable option. The Biflex success story in Australia with a proven track record and the warranty to back it up known as Eflex!
