

# CDC 3000 Bedbug Detection Case

Bed bug populations are on the rise worldwide. Reports of bites and infestations, from five-star hotels and cruise ships to back packing accommodation and private residences, are becoming more and more common. As the danger of bed bug infestations grow, industry experts agree: early detection and post-treatment testing are two of the most important elements in the fight against these pests.

Your best tool for achieving both, the Cimex Detection Case ( CDC 3000) serves as an early warning system and a follow-up tool to evaluate post-treatment populations. Using our proprietary technology that mimics the presence of a human body, the CDC 3000 emits CO<sub>2</sub>, heat, and the chemical equivalent body odour to attract even incipient levels of bed bugs.

Discreet, portable, and cost-effective, the CDC 3000 offers you the power of low-level detection before an infestation occurs—and the peace of mind that comes with testing after treatment to ensure total eradication. Detect bed bugs before they populate. Make sure they're gone for good after treatment.

*Supplying the future of pest and weed control*
