

**VECTOR**  
DISCREET

*Silent*  
*Safe*  
*Effective Insect Control*

**BRANDENBURG**  
UK Limited

Vector Discreet has been developed to ensure that Brandenburg (UK) Ltd remain innovators within the industry offering the most effective products available. Vector Discreet has been designed to be used in sensitive places, such as bars, restaurants and public areas where it will offer safe and silent insect control. Vector Discreet allows insect control units to be used in areas where both public image and hygiene are important.

Vector Discreet works using proven UVA light to attract insects and sticky control boards to ensure safe and effective insect entrapment. Research has shown that both shape and colour determine the number of insects attracted. The result of this research has been incorporated within the Discreet design to ensure optimum performance.

In addition the Vector Discreet lens uses patented translucent technology to attain the highest possible performance levels. Translucent Technology is the result of five years of effort to develop a lens system that will collect and refract the UV light. This in turn enhances total emission efficiency, which is the essence of high catch rate.

The specially formulated (74 sq inch 480 sq cm) control boards ensure fast effective insect entrapment and are completely hidden from view. They can be changed easily and quickly.

Vector Discreet incorporates the latest design innovations alongside the best-proven technology to create a product, which is uniquely different and highly efficient.

#### FEATURES

- Total Discretion
- Silent Insect Control
- High Light output 26 watt Lamp
- 72 sq inch glueboard
- Proven Effectiveness
- Worldwide Safety Certification
- Translucent Technology
- Tool-free maintenance
- Unique Innovative Attractive Design
