

Mobe Moat

NEW Mobe moat has been designed and successfully used by professional pest controllers in conjunction with some of the industries leading food manufacturers.

Mobe Moat is a roll of 18 metres of specially patented siliconised paper with an adhesive applied to one surface which has been developed and manufactured as an aid to trapping insects in areas where a high risk of contamination must be avoided.

In addition to physically trapping pests, the strip is wide enough to act as a barrier to help prevent insects from crossing over.

Mobe Moat comes with pre-printed hazard warnings to alert operators of its placement and installation instructions on every roll.

Mobe moat can be cut to the desired length giving a great number of potential applications. If trapping or monitoring insect pests, additional specialist lures can be added along the tapes length.

POTENTIAL APPLICATIONS

- To quarantine contaminated pallets of product and prevent cross contamination to other stock; such as in peanuts, rice, pet food or grain
- To act as a barrier to known cleaning products such as post fumigation commodities or finished product awaiting dispatch
- Using tape to glue the underside, Mobe Moat can be stuck to the inside of silos to prevent migration of grain pests
- Mobe moat can act as a single overnight trap in sensitive infested areas against cockroaches; such as around the perimeter of commercial kitchens.

Supplying the future of pest and weed control
