Installing Ura-Fen into Cavity

The revolution continues

- TERM-seal Termite & Damp Course Management Systems
- TERM-seal Multi-Purpose Building Solutions

TERM-seal

URA-FEN ACTIVE TERMITE BARRIER

Ura-Fen Active is a long lasting, cost competitive full block barrier for gaps, cavities and fissures in new or existing buildings to kill, repel and deter termites and moisture.

The Ura-Fen Active Barrier is formed *in situ* by an exothermic reaction that expands and forces the sealant into the smallest gaps.

Ura-Fen Active is the perfect solution for creating a permanent full block termite barrier below the damp course as a termite perimeter system.

Ura-Fen contains 2g/kg bifenthrin that is permanently locked into the sealant and is the active constituent that repels, kills and deters any attempt by termites to penetrate the barrier.

NO COSTLY RE-TREATMENTS

When a Ura-Fen cavity perimeter system is installed, there are no costly re-treatments required.

With TERM-seal PRM Active protecting the masonry and an application of TERM-seal Multi-Purpose Active coating over the Ura-Fen, provides a termite barrier that will last the lifetime of the building.
