Victor® Multi-Kill™ Electronic Mouse Trap

Recommended by professional exterminators for its 100% efficacy, the Victor® Multi Kill™ Electronic Mouse Trap is the most advanced rodent control system available in the market!

Two points of entry with a lab tested staircase design lead mice attracted to peanut butter or bacon bits (not included) into the Shock N' Drop Chamber. To reach the bait, the rodent must walk along three electrically charged patented plates which kill the mouse in less than 3 seconds.

At a 100% kill rate this means no escapes! EVER!

After the mouse expires, the Shock N' Drop Chamber automatically rotates and deposits the mouse in the collection drawer, keeping it hidden from sight. The Victor® Multi-Kill™ Electronic Mouse Trap automatically resets to capture the next mouse.

The collection drawer holds up to 10 mice before it has to be emptied.

Fully automated, the trap has the ability to eliminate your rodent problem in just 1 night.

Safe for kids and pets, the Victor® Multi Kill™ Electronic Mouse Trap features a built-in safety switch that automatically deactivates the trap whenever its door is open. Additionally, its unique tunnel design makes all electrical components inaccessible to pets and curious fingers. Requires four "C" batteries (included).
